ROTARY PARKING

ABSTRACT

Now a days in most of the city's parking is a major problem because most of them they are having four wheeler in city. For parking of this four wheeler required more space. For avoiding this problem we can use multi level parking system.

A multi-storey car-park is a building designed for car parking and where there are a number of floors or levels on which parking takes place. It is essentially a stacked car park. First multi level car parking is started in West Washington U.S.

In this project we are designing and fabricating multi level car parking system. In this project we are designing hydraulic lifting system for lifting car for different levels.
