A.Y 2017-18

COMPUTER SCIENCE ENGINEERING DEPARTMENT

Students are attended several workshops in the academic year 2017-18, by attending workshops they are get the more knowledge and learned the following

- Learn about fundamentals of computer and programming language, draw flow chart to solve given problem logically and develop algorithm to solve given program and develop the example programs on their own
- Understand the fundamentals of java and apply in different types of application development and do the sample programs using java techniques
- Design and develop user Interfaces for the Android platform and learn about what is the future scope of mobile application

ELECTRONICS AND COMMUNICATION ENGINEERING DEPARTMENT

- Understand the architecture, ISA, programming, and interface requirements of a commercially 32-bit microprocessor (ARM Cortex-M4F).
- Analyze and design to interface a microprocessor to displays, memories, ports, serial ports (USART, SPI, I2C), etc.
- Learn to use assemblers, compilers, simulators and emulators to help with design and verification for ARM processors.
- Develop, report and present design, implementation and application of open embedded system OS for the ARM processor.

MECHANICAL ENGINEERING DEPARTMENT

- After completion of the session students are able to gain knowledge and skill related to 3D Printing, and they got skill in selection of materials, equipment for industry.
- Session made students to understand the various software tools, process and techniques for digital manufacturing.

CIVIL ENGINEERING DEPARTMENT

- Student's ability to hand letter will improve, ability to perform basic sketching techniques will improve, able to draw orthographic projections and sections.
- Ability to use architectural and engineering scales will increase, ability to produce engineered drawings will improve, and ability to convert sketches to engineered drawings will increase, become familiar with office practice and standards.
- Become familiar with Auto Cad two dimensional drawings, develop good communication skills and team work.
- The test showed that the geodetic monitoring methods by means of coupled GNSS(Global navigation satellite system) receivers with total station, installed on the floor of the building, produce consistent results when compared with the conventional method of measurements.
- Only one total station installed on the floor of the building and control points on the ground. The variations found in comparisons of the results are due to the deterioration of the accuracy of GNSS measurements itself.
