Course content:

DAY	FORENOON SESSION	AFTERNOON SESSION
1	Module 1 - Introduction to Python and Computer Programming, Python - a tool, not a reptile	There is more than one Python, Let's start our Python adventure
2	Module 2 - Data Types, Variables, Basic Input-Output Operations, Basic Operators, Your first program, Python literals	Operators - data manipulation tools, Variables - data-shaped boxes, How to talk to computer?
3	Module 3 - Boolean Values, Conditional Execution, Loops, Lists and List Processing, Logical and Bitwise Operations, Making decisions in Python, Python's loops, Logic and bit operations in Python	Lists - collections of data, Sorting simple lists - the bubble sort algorithm, Lists - some more details, Lists in advanced applications
4	Module 4 - Functions, Tuples, Dictionaries, and Data Processing, Writing functions in Python, How functions communicate with their environment?	Returning a result from a function, Scopes in Python, Let's make some fun... sorry, functions, Tuples and dictionaries
5	Module 5 - Modules, Packages, String and List Methods, and Exceptions, Using modules, Some useful modules, What is package?, Errors - the programmer's daily bread, The anatomy of exception	Some of the most useful exceptions, Characters and strings vs. computers, Python's nature of strings, String methods, Strings in action, Four simple programs
6	Module 6 - The Object-Oriented Approach: Classes, Methods, Objects, and the Standard Objective Features; Exception Handling, and Working with Files, Basic concepts of object programming, A short journey from procedural to object approach, Properties, Methods	Inheritance - one of object programming foundations, Exceptions once again, Generators and closures, Processing files, Working with real files

A.Y 2018-19

COMPUTER SCIENCE ENGINEERING DEPARTMENT

Students are attended several workshops in the academic year 2018-19, by attending workshops they are get the more knowledge and learned the following

- Design and develop user Interfaces for the Android platform and learn about what is the future scope of mobile application
- How to install and configure android application development tools and what are the benefits of using android for mobile application development.
- Understand the codes (G-code and M-Code) used in CNC machines for programming
- Know the fundamentals of java and apply in different types of application development.
- Understand the PHP and XML fundamental techniques and implementing them in designing web applications
- Understand what is Reasoning, problem solving, Knowledge representation, Perception in artificial intelligence and apply them in different application implementation
- Why Python is a useful scripting language for developers and doing different example python programs on their own

ELECTRONICS AND COMMUNICATION ENGINEERING DEPARTMENT

- Experiments explore complete digital design flow of programmable ASIC through VLSI EDA tools.
- Know the design flow, types and the programming technologies of an ASIC and its construction.
- Design an ASIC for digital circuits with ASIC design flow steps consists of simulation, synthesis, floor planning, placement, routing.
- Hybrid Electric Vehicles combine the benefits of gasoline engines and **electric** motors and can be configured to meet different **objectives** such as improved fuel economy, increased power, or additional auxiliary power for electronic devices and power tools.
- Understand the basic file system of UNIX, architecture and commands
- Shell programming on UNIX OS.
- Understand and handle of System calls.
- Understand the ARM architecture, ISA, programming, and interface requirements of a 32-bit ARM microprocessor.
- Analyze and design to interface a microprocessor to displays, memories, ports, serial ports (USART, SPI, I2C), etc.

Learn to use assemblers, compilers, simulators and emulators to help with design and verification for ARM processors.

- Develop, report and present design, implementation and application of open embedded system OS for the ARM processor.
- Understand the current voltage characteristics of semiconductor devices,
- Analyze dc circuits and relate ac models of semiconductor devices with their physical Operation,
- Design and analyze of electronic circuits,
- Evaluate frequency response to understand behavior of Electronics circuits.

MECHANICAL ENGINEERING DEPARTMENT

- One week session was very significant to acquire the knowledge to the students to analyze the different gas cycles by applying thermodynamic concepts and can able to understand the combustion process in IC engines. It makes students vision wide in understanding air conditioning systems.
- After completion of the session, students are able to gain knowledge in clear impression of the breadth and practical scope of Digital Image Processing and have arrived at a level of understanding that is the foundation for most of the work currently underway in this field.
- After completion of the session students are able to gain knowledge and skill related to 3D Printing, and they got skill in selection of materials, equipment for industry.
- Session made students to understand the various software tools, process and techniques for digital manufacturing.

CIVIL ENGINEERING DEPARTMENT

- Student's ability to hand letter will improve, ability to perform basic sketching techniques will improve, able to draw orthographic projections and sections, Ability to use architectural and engineering scales will increase, ability to produce engineered drawings will improve, ability to convert sketches to engineered drawings will increase, become familiar with office practice and standards, become familiar with Auto Cad two dimensional drawings, develop good communication skills and team work.
- The use of Computer Aided tools in structural analysis and design has been proven to be effective from the results output. It was observed that the time for performing the design work is significantly reduced. Thus, this explains the importance of comparison between different software packages and more importantly performing hand calculations for like a floor and comparing for the same floor in the software packages. Therefore, it can be concluded that the structure has fulfilled the Ultimate Limit State and the Serviceability Limit State requirements.

- Use technical knowledge in construction practices to plan and design method statements for typical construction process.
- Apply basic construction and quality control methods in typical building construction work, Apply interpersonal skills to work co-operatively as a member of the construction project team.
- Use building and construction terminology to communicate and interact effectively with peers and working partners in construction project, Develop basic project management skills in construction site project.
- Recognize the roles and contributions of other team members and demonstrate the ability to adapt and change Manage personal issues, handle interpersonal situations to reduce mis- understanding and conflict among peers and team members, Develop problem solving ability with respect to limitation of resources available.
