## Python Programming

### Course content:

DAY	FORENOON SESSION	AFTERNOON SESSION
1	Introduction to Python and Computer Programming, Python - a tool, not a reptile	There is more than one Python, Let's start our Python adventure
2	Data Types, Variables, Basic Input-Output Operations, Basic Operators, Your first program, Python literals	Operators - data manipulation tools, Variables - data-shaped boxes, How to talk to computer?
3	Boolean Values, Conditional Execution, Loops, Lists and List Processing, Logical and Bitwise Operations, Making decisions in Python, Python's loops, Logic and bit operations in Python	Lists - collections of data, Sorting simple lists - the bubble sort algorithm, Lists - some more details, Lists in advanced applications
4	Functions, Tuples, Dictionaries, and Data Processing, Writing functions in Python, How functions communicate with their environment?	Returning a result from a function, Scopes in Python, Let's make some fun... sorry, functions, Tuples and dictionaries.
5	Modules, Packages, String and List Methods, and Exceptions, Using modules, Some useful modules, What is package?, Errors - the programmer's daily bread, The anatomy of exception	Some of the most useful exceptions, Characters and strings vs. computers, Python's nature of strings, String methods, Strings in action, Four simple programs
6	The Object-Oriented Approach: Classes, Methods, Objects, and the Standard Objective Features; Exception Handling, and Working with Files, Basic concepts of object programming A short journey from procedural to object approach, Properties, Methods.	Inheritance - one of object programming foundations, , Generators and closures, Processing files, Working with real files

A.Y 2019-20

### COMPUTER SCIENCE ENGINEERING DEPARTMENT

Students are attended several workshops in the academic year 2019-20, by attending workshops they are get the more knowledge and learned the following

- By giving program problem in java they will implement the program code on their own
- Using Raspberry Pi they done the different example programs
- To learn how to design and program python applications and understand why Python is a useful scripting language for developers
- How hadoop distributed file system framework is used in cloud computing and using this technique they build the different applications.
- Able to implement the algorithms and draw flowcharts for solving Mathematical and Engineering problems and Ability to design and develop Computer programs, analyzes, and interprets the concept of pointers, declarations, initialization, operations on pointers and their usage.
- Understand how data is stored using storage media in a database and learned about why and how data needs to be indexed

### ELECTRONICS AND COMMUNICATION ENGINEERING DEPARTMENT

- Working of Raspberry Pi, its features and how various components can be used with Pi. SoC architecture and SoCs used in Raspberry Pi. Booting up RPi and working with RPi using Python.
- Industry 4.0 is the application of technology to digitally transform the technologies includes the Industrial IoT, automation and robotics.
- Knowledge about the miniaturization of Electronic Systems.
- Students are able to know about the fundamentals of IC fabrication.
- Students acquire knowledge on various types of methods and rules for IC design.
- Students able to design different types of logic gates using CMOS inverter.
- Acquire knowledge about Life cycle of **embedded design** and its testing.

### MECHANICAL ENGINEERING DEPARTMENT

- After one week session we conclude that students are able to understand the performance of different engines with respect to efficiency and also got knowledge of importance of cooling systems in various types of engines. Session made the students to know how various turbines are working and its applications.

- After the successful program students are able to describe what crystal report is and gains the knowledge in sorting data technique. Program made students to expertise in working with formulas; charts also got knowledge in exporting and distributing the reports. By this program students are able to work with parameter fields.
- The Session was Fruitful and creates a positive vibration on students towards their goal. After completion of session students are able to understand and to solve various industry grade case studies and engineering problems.

## CIVIL ENGINEERING DEPARTMENT

- The test showed that the geodetic monitoring methods by means of coupled GNSS (Global navigation satellite system) receivers with total station.
- Installed on the floor of the building.
- Produce consistent results when compared with the conventional method of measurements, having only one total station installed on the floor of the building and control points on the ground.
- The variations found in comparisons of the results are due to the deterioration of the accuracy of GNSS measurements itself.
