

Sri Indu Institute of Engineering & Technology

Recognized Under 2(f) of UGC Act 1956 Approved by AICTE, New Delhi Affiliated to JNTUH, Hyderabad.

7.1.2: The Institution has facilities for alternate sources of energy and energy conservation measures

Index

S.No	Contents
1	Permission document for connecting to the grid from the
	Government/ Electricity authority.
2	Bills for the purchase of equipments for the facilities created under
	this metric.
3	Document for relevant information.

The Divisional Engineer, Operation, TSSPDCL IBRAHIMPATNAM

TS.SPDCL: SRT No: 07/18-19/ Dt: 25/03/2019.

Sir,

Sub: Elcy-TSSPDCL-Op-Sub.Divn- Installing of 80KW solar roof top SPV Generator M/S. GLOBAL TRENDSET EDUCATION(Name), S/C No: SRN2417,situated at SHRIGUDA(V), IBRAHIMPATNAM(M), R.R.DIST Approval - Reg

Ref: Your application No: NT155195216 Dt:23-03-2019

With reference to your application for installation of solar PV generator of 80KW on your roof top/premise proposed under net metering at address SHRIGUDA(V), IBRAHIMPATNAM(M), R.R.DIST is inspected by the undersigned on 25/03/2019 and found technically feasible.

Hence feasibility is approved

You are further requested to approach this office with relevant documents (Particulars of SPV modules. Grid Tie Inverter, Protective system) after completion of installation of SPV generator.

Sd/-Divisional Engineer, Operation, TSSPDCL IBRAHIMPATNAM

To

(Consumer Name and Address) M/S. GLOBAL TRENDSET EDUCATION SHRIGUDA(V), IBRAHIMPATNAM(M), R.R.DIST

This is system generated, need not be signed.

7.1.2: The Institution has facilities for alternate sources of energy and energy conservation measures

Solar Energy and Wheeling to the grid:

Sri Indu Institute of Engineering & Technology uses solar technologies to diversify their energy sources, improve efficiency, and save money. Energy developers and utilities use solar photovoltaic and concentrating solar power technologies to produce electricity on a massive scale to power in the campus.

The College Management has taken following alternative sources in conserving the energy.

- A-Block is equipped with solar photovoltaic to address climate change issues by reducing reliance on conventional fossil fuel based energy.
- With net metering connection, Solar PV System is connected to main electricity grid to allows to sell power generated by solar panels

Solar photovoltaic

Energy conservation is an attempt which has been made to reduce the consumption of energy either by using energy more efficiently or by reducing the amount of usage of devices. Also energy conservation reduces the need for energy services and can result in environmental quality, national security, personal financial security and higher power savings.

The institute's buildings are constructed to have more sunlight in day time in order to maximize visual comfort or to reduce energy use.

Net metering connection

Biogas plant:

Biogas is a renewable fuel produced by the breakdown of organic matter such as food scraps and animal waste. It can be used in a variety of ways including as vehicle fuel and for heating and electricity generation. Biogas plant was installed back side of Cafeteria in college.

Biogas plant

Sensor-based energy conservation:

Sensor-based energy conservation was installed where consumption is more, like Principal's Chamber, Labs and Staff rooms.

Occupancy sensors detect indoor activity within a certain area. They provide convenience by turning lights on automatically when someone enters a room, and save energy by turning lights off soon after the last occupant has left the room. Occupancy sensors must be located where they will detect occupants or occupant activity in all parts of the room.

Sensors installed in Lab

We will be using solar panel and batteries to store and then convert solar energy to electrical which is to be used for street lighting system. During daytime, solar energy is stored and then depending upon natural light illumination in surrounding the array of LEDs glow using same convert solar energy. The on/off movement of LEDs depends upon input/output of sensors.

Solar based energy conservation light

Use of LED bulbs/ power efficient equipment

The college management has provided following facilities in conserving the energy and power efficient equipment

- Master Switches for each Room to shut down power of entire room when not in use.
- CRT monitors are replaced with LCD/LED Monitors.
- The CFL fittings with higher rating wattage are replaced with LED fittings with lower wattage with the same luminous level in street Lights and other possible areas of Campus.
- Energy Star certified products installed in the campus are air conditioners, refrigerator, ceiling fan and others.

Utilization lo LED Lights

CRT monitors are replaced with LCD/LED Monitors
